

## Top college chooses Cutline for their renowned Engineering Technologies department

**Need:** We recently had a call from a top Lincolnshire college, asking if we could pay them a visit with the aim of further strengthening their renowned Engineering Technologies department. The college had just taken delivery of new machines in their training centre and needed a comprehensive tooling package to fit the needs of their students and faculty.

**Solution:** We visited the site the very same week to present the full Cutline catalogue and explain our range to them. Together we went through the requirements of the students and discussed the material groups that they would be machining. We suggested a range of turning tool holders and inserts that would cover their core needs, with additional scope should their needs expand in the future.

**Benefit:** Thanks to the excellent service provided by our sales team and engineer, just two days after receiving our quote, we received an order for these tool holders and inserts. The result was very happy students, with a tooling package as sharp as them!

“ The college were really pleased with our quick and comprehensive service, and we were delighted to help the engineers of tomorrow! ”

– Dene Parkin,  
Cutting Tools Application Engineer

**Quality tools**

**Excellent service**

**High-performance**
